

Concentrated **ChainBreaker** Microbe Blend

NORTH TEXAS WATER FLOOD CASE HISTORY

Location: Wichita County, TX

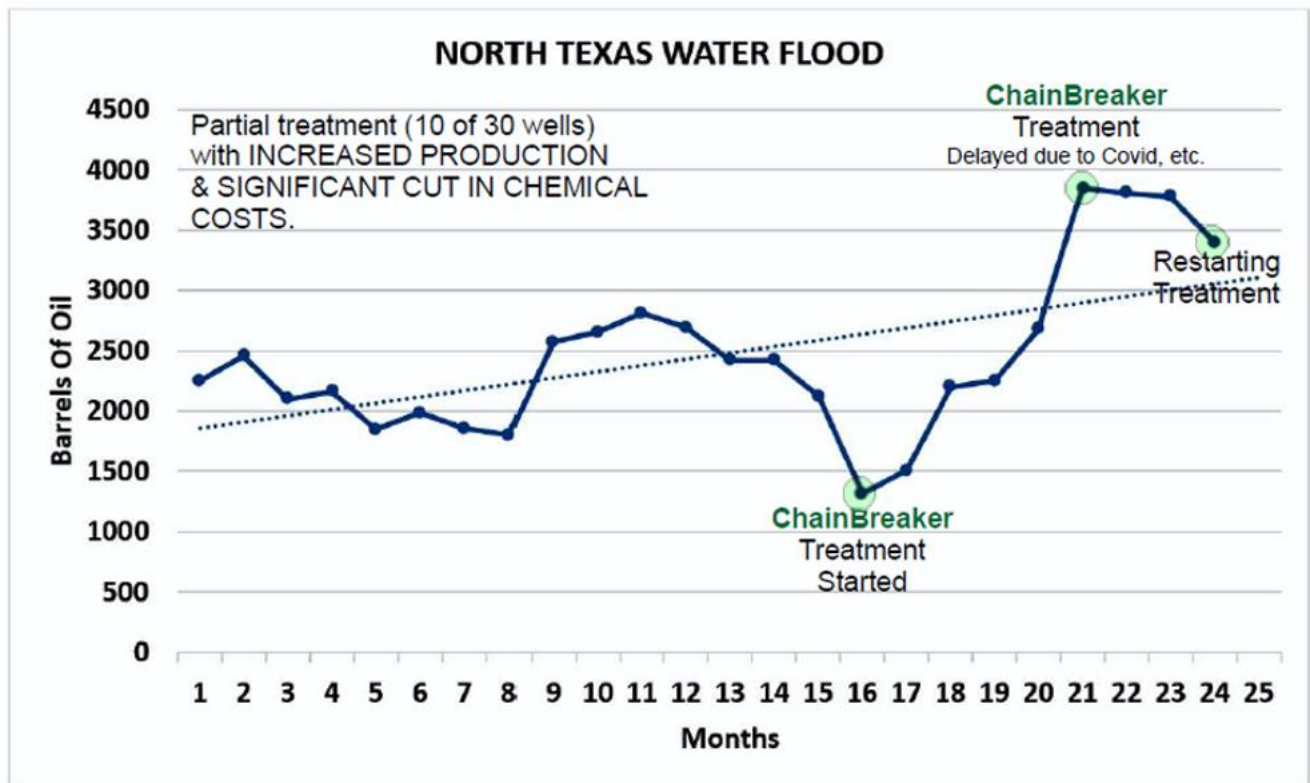

Depth: 2100-2450'

API Gravity: 38°

Formation: Cisco Sand

Water Injection Rate: 13,000 BPD

Treatment Frequency: Monthly

ChainBreaker is a proprietary, highly concentrated, non-pathogenic natural bacterium formulation designed to treat paraffin, wax build-up, scale and wellbore damage in a cost effective and environmentally friendly manner. Biosurfactants produced in-situ by the microbial strains reduce interfacial tension between oil and water improving mobilization of the oil phase.
