

SAFDEPAR™

Non-Hazardous Paraffin Solution

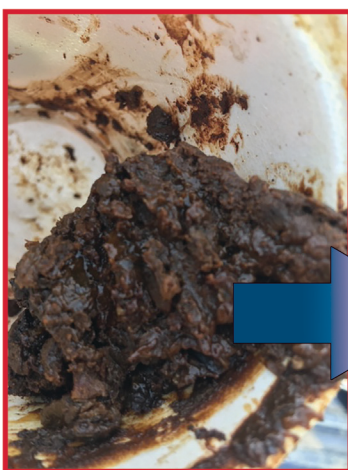

SAFDEPAR is a non-hazardous product that **removes** paraffin deposits and a dispersant that **prevents** paraffin formation in oilfield applications.

This versatile product can be utilized in producing wells with paraffin blockage, production equipment impacted by paraffin formation, SWD wells, tank batteries and pipelines.

BENEFITS of SAFDEPAR include:

- ▶ Eliminates Expensive Hot Oil Treatments
- ▶ Reduces Non-Productive Time
- ▶ Increases Daily Oil Yields
- ▶ Converts Paraffin into a Saleable Product

SAFDEPAR goes to work quickly and at low dosages (typically at 250-500 ppm).

Raw Paraffin Sample to be Treated.

Sample after being quickly agitated (shaken). The Paraffin can be pumped at this point and will continue to break down.

Paraffin continuing to break down into solution after only 7 minutes.
